An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John Molnar on 9-27-07.

Claim 1 (currently amended): An oil-sorbing filter element including comprising:
a first stage, the first stage being formed of a first medium comprising a consolidated unitary, permeable mass of a first oleophilic polymeric material; and
a second stage adjoining the first stage;
the second stage is formed of a second medium comprising a fill of separate particles of a second oleophilic polymeric material;
wherein the first and second oleophilic polymeric materials are a thermoplastic elastomer.

Claims 3 and 4 have been canceled.

On line 1 of claim 5, "4" has been changed to -1--.

On line 1 of claim 7, "3" has been changed to -1—and "oil-absorbing" has been deleted.

Art Unit: 1724

Claims 8, 9, 16, and 17 have been canceled.

On line 1 of claim 18, "17" has been changed to --1--.

On line 1 of claim 20, "16" has been changed to --1—and "oil-absorbing" has been deleted.

Claims 21 and 22 have been canceled.

On line 1 of claim 23, "first" has been changed to --second--.

On line 1 of claim 24, "10" has been changed to --23--.

Claims 26-52 have been canceled.

On line 2 of page 6 of the specification, --unitary—has been inserted before "tubular".

The following is an examiner's statement of reasons for allowance: Williamson et al (US 2001/0047967) is considered the closest prior art, however, the reference fails to teach or suggest the limitation of the first and second oleophilic polymeric materials

being a thermoplastic elastomer as recited in instant claim 1. While Hanrahan discloses filters disposed in series including thermoplastic elastomers, the reference fails to teach or suggest the first stage as being in the form of a unitary permeable mass as recited in instant claim 1. There is no suggestion to modify the unitary stage and particulate stages of Williamson et al to include the thermoplastic elastomeric oleophilic materials disclosed by Hanrahan since the filter disclosed by Williamson et al functions to coalesce water from oil whereas the Hanrahan filter functions to absorb oil from water.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew O. Savage whose telephone number is (571) 272-1146. The examiner can normally be reached on Monday-Friday, 7:00am-3:30pm.
